

## INN Barn Proxy Update

2 February, 2021

We have changed our ISP services and as a result we had to make an adjustment to the InnProxy to allow the client to continue connecting to the Inn Host. This change will take effect on Monday, February 22, 2021, therefore after this date any players still using any previous versions of InnProxy will no longer be able to connect to the Inn Host. To help redirect users to the new Proxy, we have disabled activities using older versions of InnProxy, users may still be able to login and view the map but will not be able to play without updating the InnProxy.

There are multiple ways to update your InnProxy:

### **Option 1:**

- a.) Locate your "Sierra" file folder which can be found in your primary hard drive (e.g. C:/)
- b.) Once you have found the location of your Sierra file folder, you will find an executable application called "InnProxy.exe"
- c.) At this point locate the new InnProxy which can be found on our website at [www.innbarn.com/INNProxy.zip](http://www.innbarn.com/INNProxy.zip) and replace your InnProxy with the new one

### **Option 2:**

- a.) Do a search of your computer looking for "InnProxy.exe"
- b.) Take note of the file path to your InnProxy, and then locate the file on your computer
- c.) At this point locate the new InnProxy which can be found on our website at [www.innbarn.com/INNProxy.zip](http://www.innbarn.com/INNProxy.zip) and replace your InnProxy with the new one

### **Option 3:**

- a.) Locate the "INN Barn" application
- b.) Right click on the application and select "Open file location"
- c.) At this point locate the new InnProxy which can be found on our website at [www.innbarn.com/INNProxy.zip](http://www.innbarn.com/INNProxy.zip) and replace your InnProxy with the new one

---

If none of these options work or you have any questions regarding this update, please send us an email at [support@innbarn.com](mailto:support@innbarn.com) and we will try our best to get back to you as soon as possible!
